Atty Docket N .: JCLA7737

Serial No.: 10/015,414

IN THE CLAIMS:

Please amend the claims as follows.

Claims 1-4 (canceled)

Claim 5. (Currently Amended) A method of erasing a non-volatile memory cell with a

nitride tunneling layer, the non-volatile memory comprising:

a substrate;

a nitride tunneling layer disposed on the substrate;

a charge-trapping layer having hot electron holes, disposed on the nitride tunneling layer;

a dielectric layer disposed on the charge-trapping layer;

a gate conductive layer disposed on the dielectric layer; and

a source region and a drain region disposed in the substrate beside the gate conductive

layer;

the method comprising the steps of:

programming the charge-trapping-layer with hot electron-holes; and

applying a first positive bias to the drain region, applying a second positive bias to the

gate conductive layer, and grounding the source region and the substrate to generate, hot

electrons/electron holes in a channel region, wherein said hot electrons are injected into the

charge-trapping layer through the nitride tunneling layer, and wherein said hot electrons combine

with hot electron holes in the charge-trapping layer to erase the non-volatile memory cell.

Atty Docket No.: JCLA7737

Serial No.: 10/015,414

Claim 6. (Original) The method of claim 5, wherein the first positive bias ranges from

about 2V to about 5V.

Claim 7. (Original) The method of claim 5, wherein the second positive bias ranges from

about 2.5V to about 5V.

Clam 8. (Currently Amended) The method of claim 5, wherein the first positive bias and

the second positive bias are both sufficient to erase lower than those adopted for erasing a

substrate exide nitride exide silicon (SONOS) memory having a same size as the non-volatile

memory-with the nitride tunneling layer.
